Sign in using App Passwords

An App password is a 16-digit passcode that gives an app or device permission to access your Google Account. If you use **2-Step-Verification** and are seeing a "password incorrect" error when trying to access your Google Account, an App password may solve the problem. Most of the time, you'll only have to enter an App password once per app or device, so don't worry about memorizing it.

Note: If you have iOS 8.3 on your iPhone or OSX 10.10.3 on your Mac, you will no longer have to use App passwords to use 2-Step Verification.

2-Step Verification

Turn on 2-Step Verification

When you enable 2-Step Verification (also known as two-factor authentication), you add an extra layer of security to your account. You sign in with something you know (your password) and something you have (a code sent to your phone).

Set up 2-Step Verification

click here

1. Go to the **2-Step Verification** page. You might have to sign in to your Google Account.
2. In the "2-Step Verification" box on the right, select **Start setup**.
3. Follow the step-by-step setup process.

Once you're finished, you'll be taken to the 2-Step Verification settings page. Review your settings and add backup phone numbers. The next time you sign in, you'll receive a text message with a verification code. You also have the option of using a [Security Key for 2-Step Verification](#).

Note: To ensure that you can access your account in the future, add an [email recovery option](#) as well.

Sign in using App Passwords

An App password is a 16-digit passcode that gives an app or device permission to access your Google Account. If you use 2-Step-Verification and are seeing a "password incorrect" error when trying to access your Google Account, an App password may solve the problem. Most of the time, you'll only have to enter an App password once per app or device, so don't worry about memorizing it.

Note: If you have iOS 8.3 on your iPhone or OSX 10.10.3 on your Mac, you will no longer have to use App passwords to use 2-Step Verification.

Why you may need an App password

How to generate an App password

Forgot your App password

click here

This screenshot shows the Gmail inbox interface. A help overlay titled "Help" is open on the right side, displaying instructions on "How to generate an App password". The instructions are as follows:

1. Visit your **App passwords** page. You may be asked to sign in to your Google Account.
2. At the bottom, click **Select app** and choose the app you're using.
3. Click **Select device** and choose the device you're using.
4. Select **Generate**.
5. Follow the instructions to enter the App password (the 16 character code in the yellow bar) on your device.
6. Select **Done**.

Additional text in the help overlay includes: "Once you are finished, you won't see that App password code again. However, you will see a list of apps and devices you've created App passwords for." and a note: "Note: You may not be able to create an App password for less secure apps. Learn more about [allowing less secure apps](#)."

Red annotations include a box around "App passwords" in step 1, an arrow pointing to the word "click" in step 2 with the text "click here", and another arrow pointing to the word "Generate" in step 4.

This screenshot shows the "应用专用密码" (App Passwords) settings page in Chinese. The page title is "应用专用密码" and the URL is "https://security.google.com/settings/security/apppasswords?pli=1".

The main content area contains the following text: "借助应用专用密码，两步验证用户可通过Outlook或iPhone/Mac上的“邮件”之类的应用访问其Google帐户。系统将为您生成应用专用密码，您无需记住它们。了解详情"

Below this text is a white box with the message: "您没有任何应用专用密码。" (You have no app passwords.)

Underneath the message are three elements: a dropdown menu showing "Windows 计算机" (Windows computer), another dropdown menu showing "邮件" (Email), and a blue button labeled "生成" (Generate). Red boxes highlight each of these three elements. Red arrows point to the "Windows 计算机" dropdown with the label "windows desktop", to the "邮件" dropdown with the label "email", and to the "生成" button with the label "last click here".

At the bottom of the page, there is a footer with the text: "Google 条款和隐私权政策 帮助"

生成的应用专用密码

Windows计算机的应用专用密码

mxnl bbgv sqfr kzpa

使用说明

1. 打开“邮件”应用
2. 打开“设置”菜单。
3. 选择“帐户”，然后选择您的Google帐户。
4. 将您的密码更换成由16个字符组成的密码（如上所示）。

该应用专用密码的效用跟普通密码一样。有了它，就可以获得您Google帐户的完全访问权限。您无需记住该密码，所以请勿将它写下来或告诉他人。
